

## **Title**

### **Pharmaceutical compositions based on Diclofenac**

#### **5 Abstract**

New pharmaceutical compositions for oral use containing Diclofenac together with alkali metal bicarbonates in amounts of from 20 to 80 by weight with respect to Diclofenac are described. These compositions are entirely palatable and free from any unpleasant taste or other side effects; in particular, these formulations  
10 permit to obtain in human patients higher  $C_{\max}$  of the active principle and shorter  $T_{\max}$  together with a lower coefficient of variation.
